

BEYOND INFRADEV

Beyond InfraDev is a 100% black-owned multi-disciplinary engineering and consultancy firm offering turnkey EPC (Engineering, Procurement & Construction) life-cycle services for infrastructure projects in Africa.

ABOUT

We pride ourselves in our highly skilled and dynamic team of professionals consisting of specialized engineers in the following fields: Water, Energy, Infrastructure Development & Industrial Sectors.

Our Values

- Customer Focus:** Build strong relations as a team, with clients and partners.
- Excellence:** Provide exceptional professionalism and high-quality services with a high level of competency.
- Agility:** We execute promptly with innovation and precision.
- Leadership:** Ethics, transparency and integrity.

Our Vision

To lead infrastructure development in Africa by offering world-leading innovative and turnkey/EPC engineering solutions.

Our Mission

Deliver exceptional and innovative engineering solutions by fast-tracking infrastructure development ensuring we bring dignity to our communities.

Established 2013 in Johannesburg
Co Reg. No. 2013/193661/07
B-BBEE Status - Level 1 Contributor

CIDB Grading

- 7CE PE (Civil Engineering)
- 7SD PE (Cathodic Protection)

SERVICES

Beyond InfraDev offers the following services in the built and industrial environment:

Our multi-disciplinary water service offering, encompasses the entire project lifecycle from pre-feasibility, concept and detailed design, construction management and operation as well as maintenance of bulk water supply (dams, weirs etc), water conveyance and storage (reservoirs, pump stations, canals, etc) systems (pipelines and channels), water treatment and hydraulic structures.

Our multi-disciplinary sanitation service offering, encompasses the entire project lifecycle from pre-feasibility, concept and detailed design, construction management and operation, maintenance of bulk sewer infrastructure, sewer conveyance (reticulation pipelines and pump stations) systems as well as sewage treatment.

Water

Sanitation

Our capabilities range from water master planning, situation assessments and catchment studies, infrastructure planning and design, water conservation, demand management, leak detection, water demand modelling, development and support to water service authorities and operations as well as maintenance of water supply systems.

Our capabilities range from sewer master planning, capacity assessments and catchment studies, infrastructure planning and design of sewer and operations as well as maintenance of sewer systems.

Energy

Beyond InfraDev develops and implements sustainable solutions in the energy field. The project development section services are conceptual designs, feasibility studies, cost-benefit life cycle analysis, market potential analysis, due-diligences and energy efficiency audits. The implementation section services are detailed design, tendering, project management, site supervision and commissioning.

Our capabilities range from LV, MV and HV services, standby power systems, and lighting.

Mega Projects

Beyond InfraDev develops and implements large scale, complex projects that take years to build. These projects require large capital investment commitment and have long-lasting impacts on the economy, environment and society, i.e. a STEPP approach - Society, Technology, Economy, Politics and Physical environment.

Examples of mega projects are tunnels, airports, sea ports/harbours, power plants, dams, oil & natural gas extraction projects as well as specialised research projects.

Beyond InfraDev provides specialized engineering services in the maintenance and fabrication of critical industrial assets namely boilers, heat exchangers, gasifiers and steam/gas turbines. The specialised engineering services encompasses EPC services (design, construction & maintenance) of power boilers, pressure vessels, power plant piping and welding.

Specialized Engineering

The unit service offering also includes inspection planning using risk-based methods, developing maintenance procedures, quality control & quality assurance for welding as well as Quality Management Systems, Non-destructive Testing (NDT), planning & conducting outages and commissioning maintenance activities.

Beyond InfraDev offers a multi-disciplinary transportation service that includes transport planning, roads & stormwater, traffic engineering and construction project management. Our fields of expertise are as follows;

ROADS

Materials investigations, visual surveys, pavement and geometric design for all road classes, pavement assessments for pavement management systems.

STORMWATER

Planning and design of stormwater facilities and related appurtenances such as culverts, channels, pipelines, attenuation dams, manholes and open drainage ways.

Roads & Transportation

Beyond InfraDev Geotechnical Unit provides specialist consulting services within the fields of geotechnical engineering and engineering geology to the civil, construction and mining industries. The unit offers services in all aspects related to dolomite risk management, investigations to obtain information on the physical properties of the soil and rock underlying a site to design earthworks and foundation for proposed structures.

Our specialities are in detailed investigations, railway line, road & pipeline geotechnics, foundation designs, soil & rock slope stability, earthworks & dam embankments, dolomite risk assessments/investigations, plans & rehabilitation of dolomitic land.

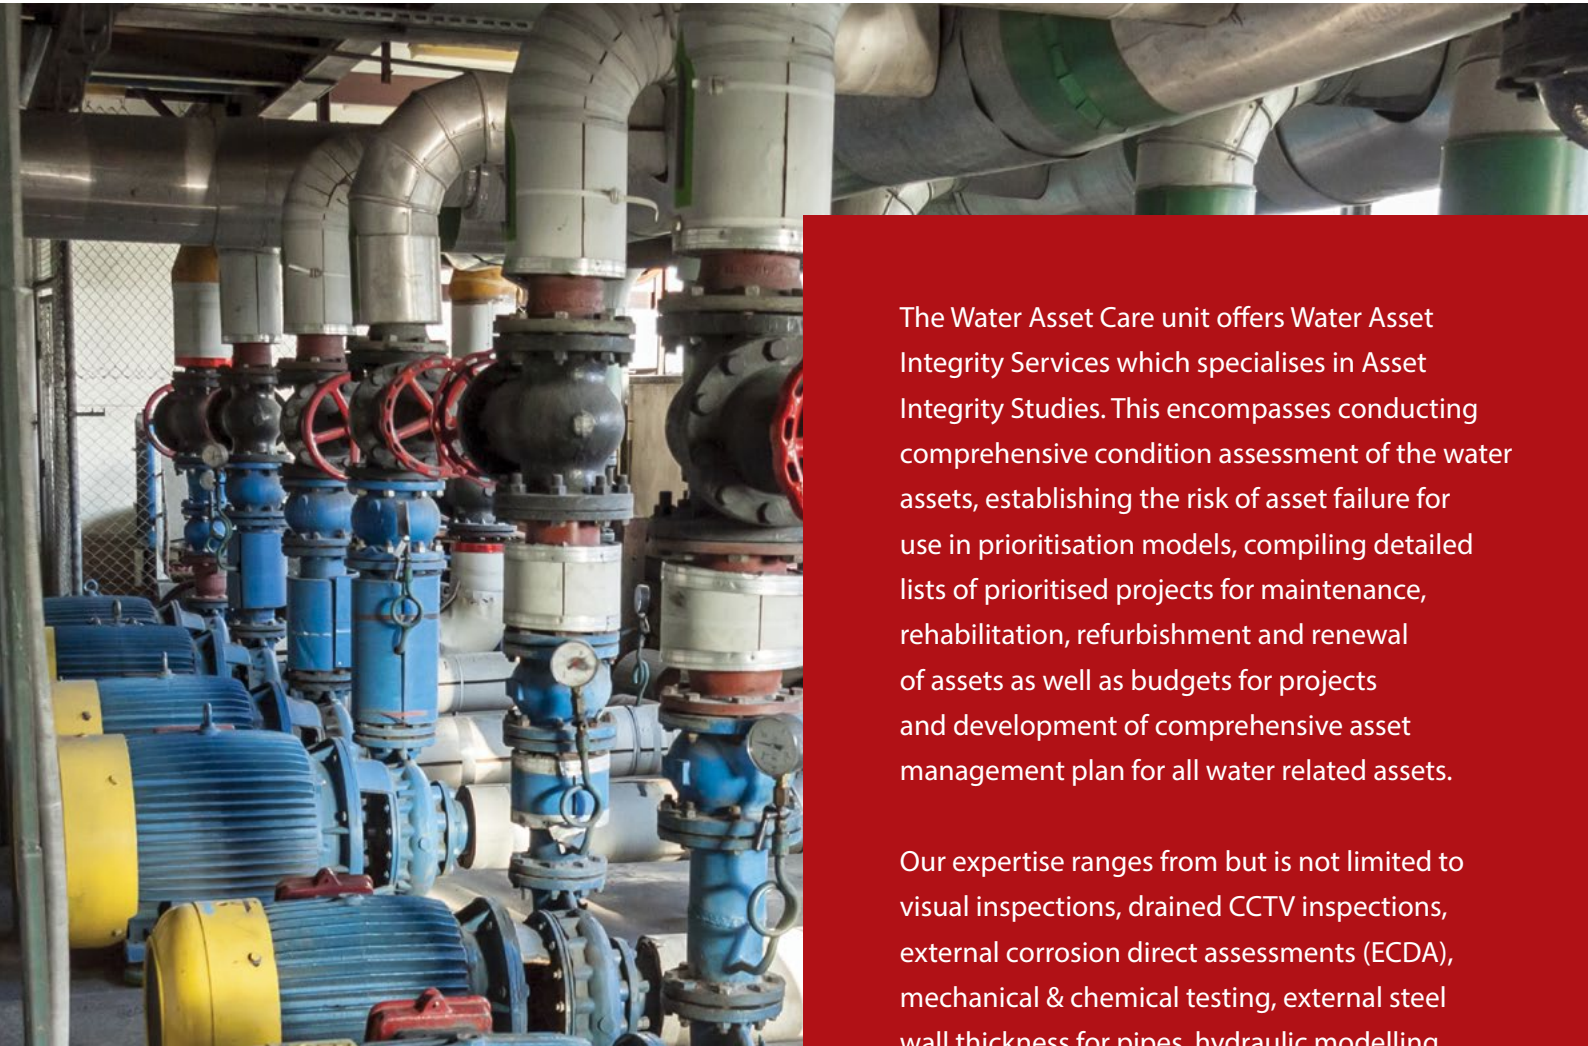

Geotechnical Engineering

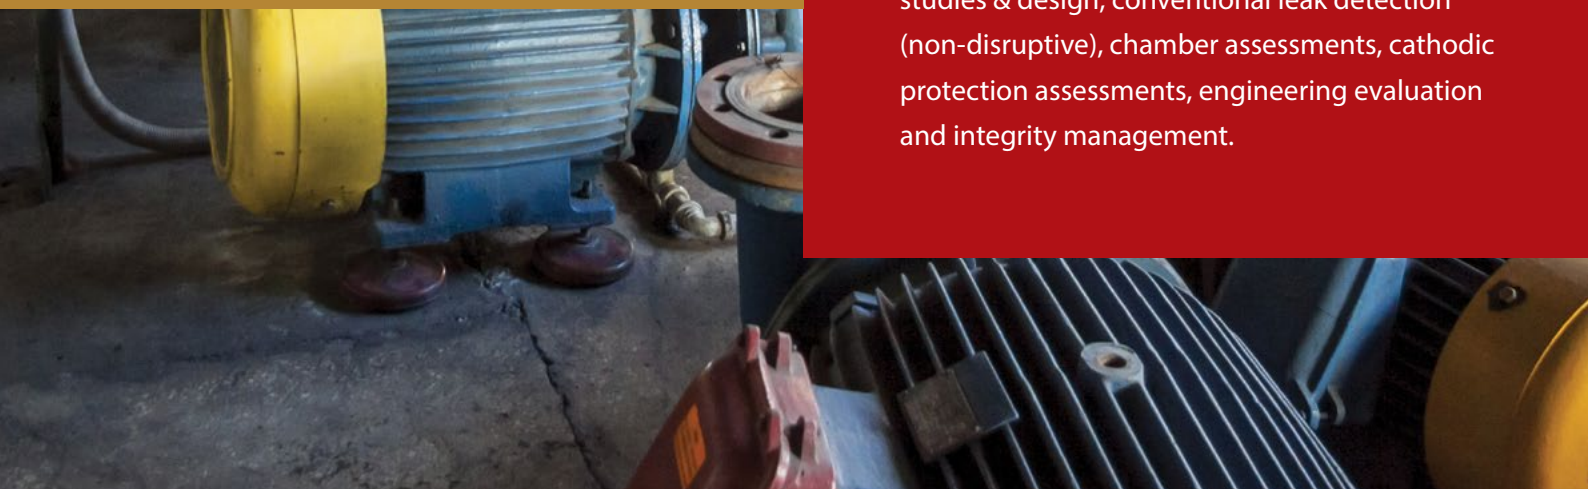

Infrastructure Asset Management

We offer Infrastructure Asset Management solutions based on the International Infrastructure Management Manual (IIMM). Our expertise complements the broader infrastructure planning and design that enables provision of holistic solutions to our clients.

Our asset management service offering encompasses asset register compilation, condition assessment of all infrastructure, asset valuations, and asset management planning (asset care solutions).

Infrastructure Asset Care

The Water Asset Care unit offers Water Asset Integrity Services which specialises in Asset Integrity Studies. This encompasses conducting comprehensive condition assessment of the water assets, establishing the risk of asset failure for use in prioritisation models, compiling detailed lists of prioritised projects for maintenance, rehabilitation, refurbishment and renewal of assets as well as budgets for projects and development of comprehensive asset management plan for all water related assets.

Our expertise ranges from but is not limited to visual inspections, drained CCTV inspections, external corrosion direct assessments (ECDA), mechanical & chemical testing, external steel wall thickness for pipes, hydraulic modelling, installation of RFID tagging, AC interference studies & design, conventional leak detection (non-disruptive), chamber assessments, cathodic protection assessments, engineering evaluation and integrity management.

Management & Advisory Services

Our Management and Advisory unit has the technological problem-solving ability of engineering as well as the organizational, administrative and planning abilities of management in order to oversee the operational performance of complex engineering driven enterprises.

Our capabilities are based on international best practice in project management, program management, specialist planning & advisory, contract management and administration, revenue enhancement, project funding and grant sourcing as well as training and capacity building.

We provide all services in the planning, project specifications, structural analysis and design, assessment of structures and construction monitoring of commercial, industrial and residential structures. Our areas of expertise include housing, buildings, bridges, water retaining structures, structural steel, civil structures and industrial buildings amongst others.

Property & Structures

Beyond InfraDev offers third part Quality Control & Quality Assurances Services for a broad spectrum of clients ranging from government departments, state owned entities, water boards, municipalities and industrial companies. The BID Quality Services provides inspectors based on client requirements, ensures quality throughout the pipeline production process and provides inspection reports and NDT aspects of inspections. Our team of inspectors are NACE, SAIW & SAQCC certified.

Our capabilities range from third party QA/ QC inspections (welding, coating & lining, pipe milling, & visual inspections), inspection and supervision of loading and off-loading operations of pipelines, pre-shipment inspections, supervision of commissioning and performance tests, product certification, accreditation for all major standards and regional and local regulations.

Quality Control & Quality Assurance

Beyond InfraDev contributes to sustainable development by delivering economic and social benefits to the communities that we interact with.

SOCIAL RESPONSIBILITY

Our involvement

Beyond InfraDev has been involved in various corporate social responsibility projects over the years through sponsoring community projects, offering bursaries to students at tertiary institutions and in many value adding projects in communities.
